## DETAILED ACTION

### *Response to Amendment*

1. This communication is in response to the amendment filed on 9/16/05. All changes to the specification and claims have been entered. Accordingly, Claims 2 and 4-6 are currently pending in the application. It is further noted of the receipt of the certified copy of the priority document (Japanese Patent Application No. 370027/2000) as requested by the applicant.

### *Allowable Subject Matter*

2. Claims 2 and 4-6 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

3. Claims 2, 4, and 5 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly disclose a transmission power control apparatus, method, and computer-readable recording medium comprising a processing means for selecting first transmission power control means from plurality of transmission power control means and setting a basic code therefor in response to generation of a call upon multi-code connection while setting subordinate codes for said second transmission power control means and having the second transmission power control means perform downstream transmission power control on a self-channel on the basis of the notified result. It is noted that the closest prior art, Willenegger et al. (US

Art Unit: 2663

2005/0208961) shows a method and apparatus for controlling transmit power of multiple channels in a CDMA system that define a single power control feedback stream on the uplink. However the stated prior art fails to disclose or render obvious to the above underline limitations as claimed.
